

THE ROAD TO ROI FROM RPA

What is RPA?

Robotic Process Automation uses software bots at an enterprise scale to automate transaction processing, data manipulation and cross-platform communication to improve process execution, quality and auditability.

Why RPA now?

Increased competition and customer bliss are driving the need for more efficiency delivered by "intelligent" technologies like RPA.

RPA can do indispensable, high-volume and laborious tasks faster and with more accuracy, leading to faster service, less error correction and less overall waste.

Digital workforce support can free up the human workforce to focus on customer value creation.

Where to launch RPA?

Critical areas that affect the business bottom line and regulatory compliance that, also, require a lot of manual effort, accuracy and speed are a perfect match for the capabilities of RPA.

Here are just a few use cases to consider:

AREA #1 REVENUE CYCLE

- Decrease processing time by up to 90%
- Reduce manual effort to as low as 10%
- Process dramatically more data points in numerous systems

AREA #3 REPORTING & COMPLIANCE

- Greatly enhance accuracy rate
- Increase operational quality
- Significant FTE savings

Achieve as much as **90%** reduction in investment cost per transaction

SDLC Partners Client Case

AREA #2 ACCOUNTS PAYABLE

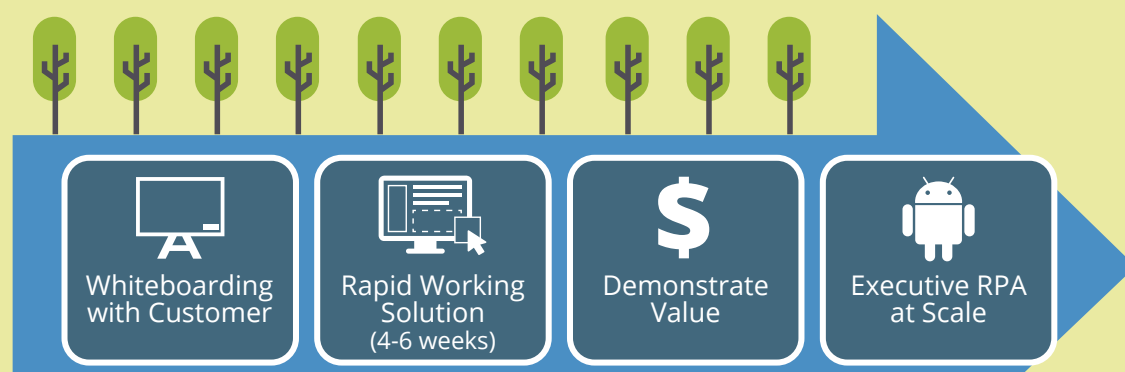

- Automate up to 100% of processes
- Massive improvement in customer relations
- Reduce error rate to as low as 0%

How to start RPA?

SDLC Partners has created an RPA Innovation Center and ramped up RPA-trained and certified teams to address the mounting payer and provider need for reliable, repeatable processes and intelligent automation.
